AP Lab 8: Population Genetics and Evolution (Adapted from the 2001 Student Lab Manual) Purpose: In this lab, you will: learn about the Hardy-Weinberg law of genetic equilibrium. study the relationship between evolution and changes in the allele frequency by using your class to represent a sample population. Prelab questions:

AP Biology Hardy-Weinberg Practice Problems ANSWER KEY

The AP college board lists 13 labs for its recommended curriculum, however, teachers are not limited to only using their versions of the lab. AP biology teachers submit a curriculum for review and approval and must include laboratory exercises that align with their core ideas. Some of the recommended labs may be too expensive or too time consuming for your class.

AP Biology Hardy-Weinberg Practice Problems – ANSWER KEY 1. You have sampled a population in which you know that the percentage of the homozygous recessive genotype (aa) is 36%. Using that 36%, calculate the following: A. The frequency of the "aa" genotype (q^2). $q^2 = 0.36$ or 36% B. The frequency of the "a" allele (q). $q = 0.6$ or 60 % C.

Lab 8 Population Genetics Introduction: G. H. Harding and W. Weinberg both came up with the idea that evolution could be viewed as changes in the frequency of alleles in a population. They used the letter "p" to represent and "A" allele and the letter "q" to represent the "a" allele. ... Continue reading "Lab 8 Ap Sample Population Genetics"

The AP Biology Laboratory Manual for Students and the companion guide for teachers do a good job of explaining the setup and troubleshooting problems, but there are always questions. Also, veteran teachers have often found new ways to save time, use less expensive materials, or completely change the design while still providing an excellent and effective lab experience for their students.

population, the reshuffling of alleles that occurs due to meiosis and recombination does not change the numbers of these alleles in the population. Hardy and Weinberg argued that a population's allele and genotype frequencies would remain statistically constant as long as five conditions were met: 1. The breeding population is very large.

Ok, so this is a little confusing, but my class did this lab using the Hardy-Weinberg Equilibrium. Here's how it worked: Our class was a population. We were given "genotypes" that we split up into cards-- we all started as Aa and had two "A" cards and two "a" cards, and then we "mated" with people, and we shuffled our cards and put down two randomly.
