An OPRP is a prerequisite program that controls a significant hazard. It is a control measure that has been deemed crucial, but not considered a CCP (not an absolute control or can be managed upstream from the CCP). OPRPs are identified through risk assessments. You will need to determine what can be measured and then determine how.

Hazard Analysis and Critical Control Point (HACCP) Toolkit

Control is taken out of the laboratory and into the processing environment. HACCP provides a structured and systematic approach to the control of identified hazards, which may be biological (microbiological), chemical, physical or a combination of the three. A Critical Control Point (CCP) is a raw material, stage, practice or

C Programming Lab manual 18CPL17 - SlideShare

A critical control point (CCP) is a step in the production process of a HACCP plan where a hazard is likely to occur, and where a control can be applied to eliminate or effectively minimize the risk of occurrence. Use the CCP identification tree (see below) as a tool to determine if a step is a critical control point.
