business world, a data warehouse might incorporate customer information from a company's point-of-sale systems (the cash registers), its website, its mailing lists and its comment cards.

GitHub - microsoft/sql-data-warehouse-samples: Snippets ...

While a database is an application-oriented collection of data, a data warehouse is focused rather on a category of data. A database is normally limited to a single application, meaning that one database usually equals one application; it usually targets one process at a time. A data warehouse, on the other hand, stores data from any number of applications.
